

National Chemical Laboratories Inc. is headquartered in Philadelphia, Pennsylvania, with a half million square foot manufacturing and operations center. We utilize large, high-pressure reactors for the production of captive raw materials used in many of our products. With a combined inventory of over 3 million gallons of raw material and finished products, our facility is one of the largest of its type in the United States. Our on-site, computerized laboratory is staffed by industry-renowned chemists, who help develop new and cutting-edge product formulations while assuring that these products meet our rigorous quality control standards. Our comprehensive range of cleaning and maintenance systems offers the advantage of single sourcing for all of your janitorial chemical needs. Whether it's hard surface resilient floors, natural stone or ceramic tile care, carpet care, green cleaning programs, restroom sanitation, industrial maintenance, supermarkets or foodservice, there's an NCL product program designed to maximize labor efficiency and control cleaning budgets.

Innovative technology has been the cornerstone of our growth, with high performance products such as BARE BONES No-Rinse, No-Scrub, Liquefying Stripper, which has set the standard for performance for nearly a decade. More recent innovations, such as our ONE Labor Saving Sealer/Finish, created the first super high solids floor finish with excellent leveling characteristics.

NCL is committed to developing "green" formulations and leading the sanitary maintenance industry in environmental and health issues. NCL chemists are committed to continually evaluating and improving our products to create a more positive environmental profile. We have a proud past of pioneering significant new products and are poised for dramatic innovation in the years ahead!

NCL recognizes that proper instruction is essential to the correct, effective use of our products. Intensive training programs are conducted at our "state-of-the-art" 8,000 sq. ft. training center located in Philadelphia, PA. These programs offer both classroom and hands-on training to provide a complete learning experience. Our CD-ROM Interactive Training Modules and manuals provide a well-rounded understanding of surfaces and proper maintenance procedures.
